Graphic design is the process of visual communication, and problem-solving through the use of type, space, image and color.

Graphic designers use various methods to create and combine words, symbols, and images to create a visual representation of ideas and messages. A graphic designer may use a combination of typography, visual arts and page layout techniques to produce a final result.

Common uses of graphic design include identity (logos and branding), publications (magazines, newspapers and books), print advertisements, posters, billboards, website graphics and elements, signs and product packaging.

WEB DESIGNING

TAILORMADE PROGRAMS TO SUIT YOUR NEEDS

Web design encompasses many different skills and disciplines in the production and maintenance of websites. The different areas of web design include web graphic design; interface design; authoring, including standardised code and proprietary software; user experience design; and search engine optimization. Often many individuals will work in teams covering different aspects of the design process, although some designers will cover them all. The term web design is normally used to describe the design process relating to the front-end (client side) design of a website .

CHARACTER MODELING & ANIMATION

TAILORMADE PROGRAMS TO SUIT YOUR NEEDS

Sometimes referred to as 3D CGI, 3D animation is a type of animation that uses computer generated images to create animated scenes. Compared to 2D animation, or traditional animation, 3D has much more depth, and it looks much more realistic. A career in 3D animation involves creating 3D moving images using computer software. These images are made with the use of digital models. After the models have been created, details are added, like hair, clothing, skin, grass, trees, and any other item that completes a scene

AUTODESK

Autodesk is a leader in 3D design, engineering and entertainment software.
